

Vivaldi Multi-Strategy Fund
Class A Shares (Ticker Symbol: OMOAX)
Class I Shares (Ticker Symbol: OMOIX)

Summary Prospectus

December 16, 2016

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's Statutory Prospectus and Statement of Additional Information and other information about the Fund online at <http://www.vivaldifunds.com/>. You may also obtain this information at no cost by calling 1-877-779-1999 or by sending an e-mail request to info@vivaldifunds.com. The Fund's Prospectus and Statement of Additional Information, both dated November 29, 2016, as each may be amended or supplemented, are incorporated by reference into this Summary Prospectus.

Investment Objective

The primary investment objective of the Vivaldi Multi-Strategy Fund (the "Fund") is to seek long-term capital appreciation by pursuing positive absolute returns across market cycles. In pursuing its objective, the Fund seeks to generate attractive long-term returns with low sensitivity to traditional equity and fixed-income indices.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. You may qualify for sales charge discounts if you and your family invest, or agree to invest in the future, at least \$50,000 in Class A shares of the Fund. More information about these and other discounts is available from your financial professional and in the section titled "Sales Charge Schedule" on page 28 of the Statutory Prospectus.

	Class A Shares	Class I Shares
Shareholder Fees <i>(fees paid directly from your investment)</i>		
Maximum sales charge (load) imposed on purchases (as a percentage of offering price)	5.00%	None
Maximum deferred sales charge (load)	None	None
Redemption fee if redeemed within 30 days of purchase	None	None
Wire fee	\$20	\$20
Overnight check delivery fee	\$25	\$25
Retirement account fees (annual maintenance fee)	\$15	\$15
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>		
Management fees	1.60%	1.60%
Distribution and service (Rule 12b-1) fees	0.25%	None
Other expenses ¹	1.65%	1.60%
Shareholder servicing fee	0.15%	0.10%
Dividend and interest expenses on short sales	1.25%	1.25%
All other expenses	0.25%	0.25%
Acquired fund fees and expenses ¹	0.29%	0.29%
Total annual fund operating expenses²	3.79%	3.49%

1 "Other expenses" and "Acquired fund fees and expenses" have been estimated for the current fiscal year. Actual expenses may differ from estimates.

2 The Fund's advisor has contractually agreed to waive its fees and/or pay for operating expenses of the Fund to ensure that total annual fund operating expenses (excluding any taxes, leverage interest, brokerage commissions, dividend and interest expenses on short sales, acquired fund fees and expenses (as determined in accordance with SEC Form N-1A), expenses incurred in connection with any merger or reorganization, and extraordinary expenses such as litigation expenses) do not exceed 2.25% and 1.95% of the average daily net assets of Class A and Class I shares of the Fund, respectively. This agreement is in effect until December 16, 2018, and it may be terminated before that date only by the Trust's Board of Trustees. The Fund's advisor is permitted to seek reimbursement from the Fund, subject to certain limitations, of fees waived or payments made to the Fund for a period ending three full fiscal years after the date of the waiver or payment.

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	One Year	Three Years
Class A	\$862	\$1,600
Class I	\$352	\$1,071

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example above, affect the Fund's performance. During the most recent fiscal year, the portfolio turnover rate of the Fund's predecessor fund, the Vivaldi Orinda Macro Opportunities Fund, was 393% of the average value of its portfolio.

Principal Investment Strategies

Vivaldi Asset Management, LLC ("Vivaldi" or the "Advisor"), the Fund's advisor, seeks to achieve the Fund's investment objective by delegating the management of a portion of Fund assets to a group of experienced investment managers that utilize a variety of investment strategies and styles (the "Sub-Advisors"). The Advisor will also manage a portion of the Fund's assets directly. When appropriate, the terms "Advisor" or "Advisors" refers to Vivaldi and the Sub-Advisors. Vivaldi retains overall supervisory responsibility for the general management and investment of the Fund's securities portfolio and is responsible for selecting and determining the percentage of Fund assets to allocate to itself and each Sub-Advisor. Each Advisor has complete discretion to invest its portion of the Fund's assets as it deems appropriate, based on its particular philosophy, style, strategies and views. While each Sub-Advisor is subject to the oversight of the Advisor, the Advisor does not attempt to manage the day-to-day investments of the Sub-Advisors.

In seeking the Fund's investment objective, the Advisors implement both fundamentally and technically driven strategies. These strategies may include, without limitation, global macro, relative value, and arbitrage strategies that invest in different asset classes, securities, and derivative instruments, as discussed below. These strategies seek to target positive absolute returns and may exhibit different degrees of volatility, as well as exposure to equity, currency, and interest rate markets. Certain strategies used by the Advisors may include exposure to different market risk factors including, but not limited to, value, growth, dividend yield, market cap and volatility.

Global Macro: Crescat Portfolio Management, LLC ("Crescat"), one of the Fund's current sub-advisors, has a broad investment mandate to invest in liquid asset classes globally, including publicly traded equity securities, fixed income securities, exchange-traded funds ("ETFs"), futures and other derivative contracts, with a goal of generating positive absolute returns over a full market cycle. Crescat seeks to generate realized gains, and in turn, positive performance for the Fund, not to manage the portfolio to a benchmark or to minimize tracking error. Crescat seeks profitable trades, both long and short, across a wide range of markets, asset classes and securities, and accordingly, long-term performance does not generally depend on the direction of any particular market or sector, or the course of economic trends. In selecting investments using the Global Macro strategy, Crescat analyzes a variety of macroeconomic factors, including fiscal and monetary policy, historical price data, country specific fundamental economic data, as well as social and demographic trends, and political events.

Relative Value: Vivaldi may invest globally, long or short, in stocks of companies of any size or market capitalization, as well as government and corporate bonds and other fixed income securities, with a goal of generating positive risk adjusted returns. Vivaldi may also invest in derivatives to seek either to manage risk or to enhance return. In selecting investments using the Relative Value strategy, Vivaldi seeks to identify securities that are mispriced or undervalued. Vivaldi employs a bottom-up analysis for individual security selection, and/or a top-down approach to capital allocation amongst various asset classes, while employing risk management strategies designed to mitigate downside risk.

Arbitrage: Vivaldi and RiverNorth Capital Management, LLC ("RiverNorth"), one of the Fund's current sub-advisors, may seek to take advantage of inefficient pricing in the markets by engaging in certain arbitrage strategies. In particular, Vivaldi utilizes a merger arbitrage strategy, which typically involves purchasing the stock of a target company while shorting the stock of the acquiring company after the announcement of a merger or acquisition. In selecting investments using the Arbitrage strategy, Vivaldi analyzes the attractiveness of the merger or acquisition, the length of time until the proposed transaction closes and the potential downside risk to the portfolio in the event the merger or acquisition does not occur. RiverNorth utilizes a closed-end fund arbitrage strategy, which involves identifying closed-end funds that are trading at a premium or discount to their underlying net-asset values, and taking long and/or short positions accordingly.

The Fund invests, both long and short, in a wide range of U.S. and non-U.S. publicly traded securities including, but not limited to, equity securities, fixed-income securities, currencies and derivatives. The Fund's allocation to these various security types and various asset classes will vary over time in response to changing market opportunities. The Fund may:

- Invest without limit in equity securities of issuers of any market capitalization including common stocks, and American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”);
- Invest in shares of other registered investment companies and ETFs;
- Invest up to 10% of its net assets in initial public offerings (“IPOs”);
- Invest without limit in foreign securities, including up to 50% of its net assets in securities of issuers located in emerging markets. The Fund's Advisor defines issuers located in emerging markets as those companies that have a majority of their assets located in, or derive a majority of their revenues from, emerging market countries;
- Invest up to 80% of its net assets in fixed income securities of any maturity, including corporate bonds, debt issued by the U.S. Government and its agencies and exchange traded notes (“ETNs”). Such fixed income investments may include high-yield or “junk” bonds and may be of any maturity;
- Invest up to 85% of its net assets in derivatives including options, futures (including commodities futures), forward currency contracts and swaps, including credit-default swaps. These derivative instruments may be used for investment purposes or to modify or hedge the Fund's exposure to a particular investment market related risk, as well as to manage the volatility of the Fund;
- Invest up to 60% of its net assets in currencies and forward currency contracts;
- Utilize leverage (by borrowing against a line of credit for investment purposes) of up to 10% of the Fund's total assets as part of the portfolio management process;
- Invest a significant portion of its assets in the securities of companies in the same sector of the market; and
- Sell securities short with respect to 100% of its net assets. A short sale is the sale by the Fund of a security which it does not own in anticipation of purchasing the same security in the future at a lower price to close the short position.

For either investment or hedging purposes, or to manage the volatility of the Fund, the Advisors may invest substantially in a broad range of the derivatives instruments described above, particularly futures contracts. The Advisors may be highly dependent on the use of futures and other derivative instruments, and to the extent that they become unavailable, this may limit an Advisor from fully implementing its investment strategy.

The Advisor expects that the Fund will have a portfolio turnover significantly in excess of 100% on an annual basis.

The Advisors invest in the securities described above when they believe the securities have a strong appreciation potential (long investing, or actually owning a security) or potential to decline in value (short investing, or borrowing a security from a broker and selling it, with the understanding that it must later be bought back and returned to the broker). The Fund sells (or closes a position in) a security when the Advisor or a Sub-Advisor determines that a particular security has achieved its investment expectations or the reasons for maintaining that position are no longer valid, including: (1) if the Advisor's or Sub-Advisor's view of the business fundamentals or management of the underlying company changes; (2) if a more attractive investment opportunity is found; (3) if general market conditions trigger a change in the Advisor's or Sub-Advisor's assessment criteria; or (4) for other portfolio management reasons.

Temporary Defensive Strategy

When adverse market, economic, political or other conditions dictate a more defensive investment strategy, the Fund may, on a temporary basis, hold cash or invest a portion or all of its assets in money market instruments including obligations of the U.S. government, its agencies or instrumentalities, obligations of foreign sovereignties, or other high-quality debt securities, including prime commercial paper, repurchase agreements and bank obligations, such as bankers' acceptances and certificates of deposit. Under normal market conditions, the potential for capital appreciation on these securities will tend to be lower than the potential for capital appreciation on other securities that may be owned by the Fund. In taking such a defensive position, the Fund would temporarily not be pursuing its principal investment strategies and may not achieve its investment objective.

Principal Risks of Investing

Risk is inherent in all investing. A summary description of certain principal risks of investing in the Fund is set forth below. Before you decide whether to invest in the Fund, carefully consider these risk factors associated with investing in the Fund, each of which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objectives.

Market risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates or

adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry.

Management and strategy risk. The value of your investment depends on the judgment of the Fund's Advisors about the quality, relative yield, value or market trends affecting a particular security, industry, sector or region, which may prove to be incorrect. Investment strategies employed by the Fund's Advisors may not result in an increase in the value of your investment or in overall performance equal to other investments.

Equity risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or factors relating to specific companies in which the Fund invests.

Multi-style management risk. Because portions of the Fund's assets are managed by different advisors using different styles, the Fund could enter into overlapping securities transactions. For example, one advisor may be purchasing securities at the same time another advisor may be selling those same securities, which may lead to higher transaction expenses than a fund managed by one advisor.

Foreign investment risk. The prices of foreign securities may be more volatile than the prices of securities of U.S. issuers because of economic and social conditions abroad, political developments, and changes in the regulatory environments of foreign countries. In addition, changes in exchange rates and interest rates may adversely affect the values of the Fund's foreign investments. Foreign companies are generally subject to different legal and accounting standards than U.S. companies, and foreign financial intermediaries may be subject to less supervision and regulation than U.S. financial firms. Foreign securities include ADRs and GDRs. Unsponsored ADRs and GDRs are organized independently and without the cooperation of the foreign issuer of the underlying securities, and involve additional risks because U.S. reporting requirements do not apply and the issuing bank will recover shareholder distribution costs from changes in share prices and payment of dividends.

Emerging market risk. Many of the risks with respect to foreign investments are more pronounced for investments in issuers in developing or emerging market countries. Emerging market countries tend to have more government exchange controls, more volatile interest and currency exchange rates, less market regulation, and less developed economic, political and legal systems than those of more developed countries. In addition, emerging market countries may experience high levels of inflation and may have less liquid securities markets and less efficient trading and settlement systems.

Currency risk. The values of investments in securities denominated in foreign currencies increase or decrease as the rates of exchange between those currencies and the U.S. Dollar change. Currency conversion costs and currency fluctuations could erase investment gains or add to investment losses. Currency exchange rates can be volatile and are affected by factors such as general economic conditions, the actions of the U.S. and foreign governments or central banks, the imposition of currency controls, and speculation.

Micro-cap, small-cap and mid-cap company risk. The securities of micro-capitalization, small-capitalization and mid-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

Large-cap company risk. Larger, more established companies may be unable to attain the high growth rates of successful, smaller companies during periods of economic expansion.

Derivatives risk. Derivatives include instruments and contracts that are based on and valued in relation to one or more underlying securities, financial benchmarks, indices, or other reference obligations or measures of value. Major types of derivatives include futures, options, swaps and forward contracts. Depending on how the Fund uses derivatives and the relationship between the market value of the derivative and the underlying instrument, the use of derivatives could increase or decrease the Fund's exposure to the risks of the underlying instrument. Using derivatives can have a leveraging effect and increase fund volatility. A small investment in derivatives could have a potentially large impact on the Fund's performance. Derivatives transactions can be highly illiquid and difficult to unwind or value, and changes in the value of a derivative held by the Fund may not correlate with the value of the underlying instrument or the Fund's other investments. Many of the risks applicable to trading the instruments underlying derivatives are also applicable to derivatives trading. However, additional risks are associated with derivatives trading that are possibly greater than the risks associated with investing directly in the underlying instruments. These additional risks include, but are not limited to, illiquidity risk and counterparty credit risk. For derivatives that are required to be cleared by a regulated clearinghouse, other risks may arise from the Fund's relationship with a brokerage firm through which it would submit derivatives trades for clearing, including in some cases from fellow clearing customers of the brokerage firm. The Fund would also be exposed to counterparty risk with respect to the clearinghouse. Financial reform laws have changed many aspects of financial regulation applicable to derivatives. Once implemented, new regulations, including margin, clearing, and trade execution requirements, may

make derivatives more costly, may limit their availability, may present different risks or may otherwise adversely affect the value or performance of these instruments. The extent and impact of these regulations are not yet fully known and may not be known for some time.

Futures risk. The value of a futures contract tends to increase and decrease in correlation with the value of the underlying instrument. Risks of futures contracts may arise from an imperfect correlation between movements in the price of the futures and the price of the underlying instrument. The Fund's use of futures contracts (and related options) exposes the Fund to leverage risk because of the small margin requirements relative to the value of the futures contract. A relatively small market movement will have a proportionately larger impact on the funds that the Fund has deposited or will have to deposit with a broker to maintain its futures position. Leverage can lead to large losses as well as gains. While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. Futures exchanges may impose daily or intraday price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, the Fund may be unable to close out its futures contracts at a time that is advantageous. The price of futures can be highly volatile; using them could lower total return, and the potential loss from futures could exceed the Fund's initial investment in such contracts.

ETF risk. Investing in an ETF will provide the Fund with exposure to the securities comprising the index on which the ETF is based and will expose the Fund to risks similar to those of investing directly in those securities. Shares of ETFs typically trade on securities exchanges and may at times trade at a premium or discount to their net asset values. In addition, an ETF may not replicate exactly the performance of the benchmark index it seeks to track for a number of reasons, including transaction costs incurred by the ETF, the temporary unavailability of certain index securities in the secondary market or discrepancies between the ETF and the index with respect to the weighting of securities or the number of securities held. Investing in ETFs, which are investment companies, involves duplication of advisory fees and certain other expenses. The Fund will pay brokerage commissions in connection with the purchase and sale of shares of ETFs.

Closed-end funds (CEFs) risk. The Fund may invest in shares of CEFs. Investments in CEFs are subject to various risks, including reliance on management's ability to meet a CEF's investment objective and to manage a CEF's portfolio, and fluctuation in the market value of a CEF's shares compared to the changes in the value of the underlying securities that the CEF owns. In addition, the Fund bears a pro rata share of the management fees and expenses of each underlying CEF in addition to the Fund's management fees and expenses, which results in the Fund's shareholders being subject to higher expenses than if they invested directly in the CEFs.

Fixed income securities risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer's credit rating or market perceptions about the creditworthiness of an issuer. Generally fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall, and longer-term and lower rated securities are more volatile than shorter-term and higher rated securities.

Interest rate risk. Generally fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall. For example, the price of a security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Generally, the longer the maturity and duration of a bond or fixed rate loan, the more sensitive it is to this risk. Falling interest rates also create the potential for a decline in the Fund's income. Changes in governmental policy and general economic developments, among other factors, could cause interest rates to increase and could have a substantial and immediate effect on the values of the Fund's investments. These risks are greater during periods of rising inflation. In addition, a potential rise in interest rates may result in periods of volatility and increased redemptions that might require the Fund to liquidate portfolio securities at disadvantageous prices and times.

Credit risk. If an issuer or guarantor of a debt security held by the Fund, or a counterparty to a financial contract with the Fund, defaults or is downgraded or is perceived to be less creditworthy, or if the value of the assets underlying a security declines, the value of the Fund's portfolio will typically decline.

Government-sponsored entities risk. The Fund's investment in U.S. government obligations may include securities issued or guaranteed as to principal and interest by the U.S. government, or its agencies or instrumentalities. Payment of principal and interest on U.S. government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. There can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

High yield ("junk") bond risk. High yield bonds are debt securities rated below investment grade (often called "junk bonds"). Junk bonds are speculative, involve greater risks of default, downgrade, or price declines and are more volatile and tend to be less liquid than investment-grade securities. Companies issuing high yield bonds are less financially strong, are more likely to encounter financial difficulties, and are more vulnerable to adverse market events and negative sentiments than companies with higher credit ratings.

ETN risk. ETNs are debt securities that combine certain aspects of ETFs and bonds. ETNs are not investment companies and thus are not regulated under the 1940 Act. ETNs, like ETFs, are traded on stock exchanges and generally track specified market indices, and their value depends on the performance of the underlying index and the credit rating of the issuer. ETNs may be held to maturity, but unlike bonds there are no periodic interest payments.

Merger arbitrage transactions risk. The Fund may invest or take short positions in securities of companies that are the subject of an acquisition. When the Advisor determines that it is probable that an acquisition will be consummated, the Fund may seek to purchase securities at prices below the anticipated value to be paid or exchanged for such securities in the merger, exchange offer or cash tender offer (and above the price at which such securities traded immediately prior to the announcement of the merger, exchange offer or cash tender offer). Likewise, when the Advisor believes it is likely that a transaction will not be consummated, the Fund may take short positions in such securities in order to seek to capture the difference attributable to the perceived market overvaluation of the acquisition target. In the case of an investment in a potential acquisition target, if the proposed merger, exchange offer or cash tender offer appears likely not to be consummated, in fact is not consummated, or is delayed, the market price of the security to be tendered or exchanged will usually decline sharply, resulting in a loss to the Fund.

Leveraging risk. Certain Fund transactions, including entering into futures contracts and taking short positions in financial instruments, may give rise to a form of leverage. Leverage can magnify the effects of changes in the value of the Fund's investments and make the Fund more volatile. Leverage creates a risk of loss of value on a larger pool of assets than the Fund would otherwise have had. The Fund may also have to sell assets at inopportune times to satisfy its obligations in connection with such transactions.

Short sales risk. A short sale is a transaction in which the Fund sells a security it does not own in anticipation that the market price of that security will decline. In connection with a short sale of a security or other instrument, the Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise. If the price of the security or other instrument sold short increases between the date of the short sale and the date on which the Fund replaces the security or other instrument borrowed to make the short sale, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase.

Growth-oriented investment strategies risk. Growth funds generally focus on stocks of companies believed to have above-average potential for growth in revenue and earnings. Growth securities typically are very sensitive to market movements because their market prices frequently reflect projections of future earnings or revenues, and when it appears that those expectations will not be met, the prices of growth securities typically fall.

Value-oriented investment strategies risk. Value stocks are those that are believed to be undervalued in comparison to their peers due to adverse business developments or other factors. Value investing is subject to the risk that the market will not recognize a security's inherent value for a long time or at all, or that a stock judged to be undervalued may actually be appropriately priced or overvalued. In addition, during some periods (which may be extensive) value stocks generally may be out of favor in the markets. Therefore the Fund is most suitable for long-term investors who are willing to hold their shares for extended periods of time through market fluctuations and the accompanying changes in share prices.

IPO risk. The market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk.

Sector focus risk. The Fund may invest a larger portion of its assets in one or more sectors than many other mutual funds, and thus will be more susceptible to negative events affecting those sectors.

Portfolio turnover risk. Active and frequent trading of the Fund's portfolio securities may lead to higher transaction costs and may result in a greater number of taxable transactions than would otherwise be the case, which could negatively affect the Fund's performance. A high rate of portfolio turnover is 100% or more.

Performance

The bar chart and table below provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year for Class I Shares and by showing how the average annual total returns of each class of the Fund compare with the average annual total returns of a broad-based market index. Performance for classes other than those shown may vary from the performance shown to the extent the expenses for those classes differ. Updated performance information is available at the Fund's website, www.vivaldifunds.com, or by calling the Fund at 1-877-779-1999.

The Fund will commence operations and acquire the assets and liabilities of the Vivaldi Orinda Macro Opportunities Fund (the "Predecessor Fund"), a series of Advisors Series Trust, on December 16, 2016. As a result of the acquisition, the Fund will be the accounting successor of the Predecessor Fund. Performance results shown in the bar chart and the performance table below reflect the performance of the Predecessor Fund. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future.

Calendar-Year Total Return (before taxes) for Class I Shares

For each calendar year at NAV

The year-to-date total return for the Predecessor Fund's Class I shares as of September 30, 2016 was 5.79%.

Highest Calendar Quarter Return at NAV	2.39%	Quarter Ended 03/31/2014
Lowest Calendar Quarter Return at NAV	(4.60)%	Quarter Ended 06/30/2013

Average Annual Total Returns for Periods Ended December 31, 2015	One Year	Since Inception (4/30/2012)
Class I Shares - Return Before Taxes	2.98%	2.18%
Class I Shares - Return After Taxes on Distributions*	1.35%	1.65%
Class I Shares - Return After Taxes on Distributions and Sale of Fund Shares*	2.18%	1.55%
Class A Shares - Return Before Taxes	(2.47)%	0.45%
BofA Merrill Lynch 3 Month US Treasury Bill Index (reflects no deduction for fees, expenses or taxes)	0.05%	0.07%

* After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. After-tax returns are shown for Class I Shares only and after-tax returns for classes other than Class I will vary from returns shown for Class I.

Investment Advisor and Sub-Advisors

Vivaldi Asset Management, LLC is the Fund's Advisor. Crescat Portfolio Management, LLC and RiverNorth Capital Management, LLC are the Fund's Sub-Advisors.

Portfolio Managers

The portfolio management teams for the Advisor and Sub-Advisors are comprised of the individuals listed below. Messrs. Peck, Hergott and Murphy are jointly and primarily responsible for the overall management of the Fund, including the determination of the allocation of the Fund's assets to each Sub-Advisor. The portfolio managers within each team are jointly and primarily responsible for the day-to-day management of the portion of the Fund's portfolio managed by the Advisor or applicable Sub-Advisor.

Investment Advisor	Portfolio Managers	Managed the Predecessor Fund/Fund Since:
Vivaldi Asset Management, LLC	Michael Peck, CFA, President, Co-CIO, PM	2014
	Scott Hergott, Director of Research, Co-CIO, PM	2014
	Jeff O'Brien, PM	2015
	Kyle Mowery, PM	2015
	Brian Murphy, PM	2015

Sub-Advisors	Portfolio Managers	Managed the Predecessor Fund/Fund Since:
Crescat Portfolio Management, LLC	Kevin Smith, CFA, CEO, CIO, PM	2012
RiverNorth Capital Management, LLC	Patrick W. Galley, CFA, PM Stephen O'Neill, CFA, PM	2016 2016

Purchase and Sale of Fund Shares

To purchase shares of the Fund, you must invest at least the minimum amount.

Minimum Investments	To Open Your Account	To Add to Your Account
Class A		
Direct Regular Accounts	\$5,000	None
Direct Retirement Accounts	\$5,000	None
Automatic Investment Plan	\$5,000	None
Gift Account For Minors	\$5,000	None
Class I		
Direct Regular Accounts	\$100,000	None
Direct Retirement Accounts	\$100,000	None
Automatic Investment Plan	\$100,000	None
Gift Account For Minors	\$100,000	None

Fund shares are redeemable on any business day the New York Stock Exchange (the “NYSE”) is open for business, by written request or by telephone.

Tax Information

The Fund’s distributions are generally taxable, and will ordinarily be taxed as ordinary income, qualified dividend income or capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. Shareholders investing through such tax-advantaged arrangements may be taxed later upon withdrawal of monies from those arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
